

Crisis Only Penetration Rates - General Population by RSN by Age.

Operational Definition: The proportion of people in the general population who received publicly funded crisis only mental health services in the Fiscal Year by RSN.

Operational Measure: This is calculated by dividing the number of clients who received crisis only mental health services during a Fiscal Year by an estimate of the general population as of April 1st of the Calendar Year by RSN.

Formulas:

$$\frac{\text{Number of clients receiving the crisis only mental health services during Fiscal Year by RSN} \\ \{0-17, 18-59, 60+\}}{\text{Estimate of people in the general population in the Calendar Year by RSN} \\ \{0-17, 18-59, 60+\}} \times 1000$$

Discussion: The crisis only penetration rates for the general population have increased consistently over the 3 Fiscal Years for all age groups - youth, adults, and older adults. There is also slight variation among RSNs in their crisis only penetration rates.

Data Notes:

- Crisis services are defined as services reported by RSNs to the MHD using codes contained in the Medicaid State Plan Modality Crisis Services.
- Counts are of people, not admissions, episodes, or units of service.
- Population numbers for Fiscal Year 2003, 2004, 2005 are based on Washington State's Office of Financial Management (OFM) estimates from the 2000 Census.
- RSN counts show the number of unduplicated clients within each RSN (i.e. a person is counted once in each RSN where they receive services).
- The State total is unduplicated across all RSNs (i.e. each person is only counted once in the Statewide total even though they can be counted in more than one RSN).
- Age is calculated as of January 1, yyyy for each Fiscal Year.
